Here’s how easy it is to create flawless paint!

1. **Wash**
   Remove loose contaminants using a traditional hose and bucket, foaming system, rinseless, or waterless method.

2. **Clay**
   Prep the surface and produce a truly clean slate by removing stubborn, embedded contaminants from your paint.

3. **Butter**
   Spread product onto pad face starting at center and work to outer edge. Spread evenly with domed cap.

4. **Polish**
   Place the buffing pad onto paint, set machine speed to 2, then spread product in a 2'x2' area. Turn speed up to 3-5 for polishing.

5. **Wipe**
   After polishing wipe residue away with a premium microfiber towel, turning the towel often, then buff to a brilliant luster.

*Have fun in your garage!*
