

WHE800

**PURPLE
PLATYPUS[™]
OCTIDRIVE
MKII**

**ANOTHER CLASSIC RETURNS TO
THE WAY HUGE BESTIARY!**

Just like the original, the Purple Platypus Octidrive MkII combines the burly, buttery tones and amp-clobbering gain of the Red Llama Overdrive[™] with a frequency doubler that creates an octave-up effect that will take you all the way from from eerie ring modulator style effects to downright massive octave fuzz.

External Controls

- 1** VOLUME sets output level
- 2** DRIVE knob sets overdrive intensity
- 3** HI-CUT knob rolls off high end frequencies

POWER

The Purple Platypus™ Octidrive is powered by a single 9-volt battery, a 9-volt AC adapter such as the Dunlop ECB003, or the DC Brick™, and Iso-Brick™ and Mini Iso-Brick™, power supplies. The power input is a 5.5mm x 2.1mm jack with the positive voltage on the outer sleeve. Using an external power supply will disconnect the battery. Disconnect the input jack to preserve battery life when not in use. The pedal will lock into bypass mode when it is time to change the battery. It also includes power protection circuitry to prevent damage from AC power supplies.

Specifications

Bypass	Relay Bypass
Current Draw	6 mA
Power Supply	DC 9 volts
