Sequencing
PUZZLE CARDS

Activity Guide
Set of 10, double-sided, self-checking puzzles.

Everyday Activities sequencing puzzle cards teach the results of cause and effect, one of the basic elements of reasoning.
Before you begin, review each sequence with the children, carefully explaining what is happening in each puzzle. Have children write what happened before the first card, and what happened after the last card. Discuss each completed sequence with the children.

**Sequence Stories**

Challenge children to create a continuing story to their favorite daily activity sequence. Use the three card sequence as the plot. Long as it pertains to the plot.

**Sequence Chase**

Possible.

Challenge the children to complete as many sequences as possible. The player with the most completed sequences at the end wins!

**Building Sequences**

Carefully separate each card. Discuss each completed sequence with the children. Then, carefully explain what is happening in each puzzle.

**About Sequencing Puzzle Cards**

Building Sequences

and simple reasoning skills. Have a parent or teacher separate and mix up all of the cards and separate the children to complete as many sequences as possible. The player who completes the sequences, 10 at a time, the first, wins.

**Sequence Chase**

Challenge the children to build all 20 sequences, 10 at a time. Then, flip the pieces over to complete the other side. When the children are comfortable with the sequences, separate and mix up all the cards and place them randomly into a bucket. Place the bucket in the middle of the playing surface. A player begins by taking one card from the bucket. The cards go around to the left until a player completes a sequence. The cards are completed until a player completes a sequence. The cards go around to the left until a player takes a card from the bucket and tries to complete the sequence. Therefore, this set of puzzle cards will help to reinforce the results of cause and effect.骗局 into a glass (3) Drinking the glass of juice (2) Pouring the juice (1) Going to the refrigerator and taking out the juice. A sequence is the order in which things or events occur or are arranged. For example, three simple steps to having a glass of juice:

A sequence is the order in which things or events occur or are arranged. For example, three simple steps to having a glass of juice:

1) Going to the refrigerator and taking out the juice, 2) Pouring the juice into a glass, 3) Drinking the glass of juice. Therefore, this set of puzzle cards will help to reinforce the results of cause and effect. Therefore, this set of puzzle cards will help to reinforce the results of cause and effect. Therefore, this set of puzzle cards will help to reinforce the results of cause and effect.
