The Double-Sided Graphing Pocket Chart is a helpful resource in your classroom. With colorful horizontal and vertical bars, it helps show data clearly and makes graphing fun!

A bar graph is a fast way to show big differences, as well as to show relationships between groups. Two or more things are usually compared in a bar graph.

Discover a variety of ways to use this pocket chart. Use it during a math lesson or for a question of the day!

**Chart Setup**

Choose a side of the pocket chart. Then decide which axis you will use for the numbers and which for the variables. The preprinted cards are designed for immediate use. There are number cards as well as three
topics to which students will relate: Sports, Pets, and Food. For each topic, there are five variables and appropriate images for each. Each topic also has an engaging card for the graph’s title. Use the blank cards included to customize your chart. Write the student’s name on the blank cards for personalized graphing.

Now that you have chosen a topic and inserted the title card, as well as the x and y axis cards, the graph is ready to use! Start by taking a class survey. Have the students come up and choose a picture card that matches their choice and put it in the pocket chart. After everyone has had a turn, look at the data and discuss.

When not in use, store graphing and title cards in the hand storage pockets on the bottom of the chart.

The Double-Sided Graphing Pocket Chart is a unique addition to your classroom!

**Note:** Use a wet- or dry-erase marker when writing on the cards to ensure repeated use. Test your marker on a corner of one card to ensure that your marker does not leave a permanent mark. Use a damp cloth when removing wet-erase marks from the cards. Cards will warp if saturated with water.
